

# Person類別範例0

類別定義、建構與解構函式[]getters與setters

---

## 簡介

Person類別是用以對「真實世界(real world)」中的「人」進行「抽象對映(mapping abstraction)」的定義。此類別也是我們用以進行教學的主要類別，因此它是一個比較相對簡化的例子。

## Data Members

- [-] firstname : string
- [-] lastname : string

## Member Functions

- [+] set\_firstname(string fn) : void -> setter for firstname
- [+] get\_firstname():string -> getter for firstname
- [+] set\_lastname(string fn) : void -> setter for lastname
- [+] get\_lastname():string -> getter for lastname
- [+] showInfo(): void -> print out its information

## Constructor and Destructor

- Person() -> set default values of firstname and lastname as “unknown”
- Person(string fn, string ln) -> set firstname and lastname as fn and ln
- ~Person() -> print out that it has been deleted!

## Source Code

```
#include <iostream>
using namespace std;

#ifdef _PERSON_
#define _PERSON_

class Person
```

```
{
private:
    string firstname;
    string lastname;

public:
    Person();
    Person(string, string);
    void showInfo();
    void set_firstname(string fn);
    string get_firstname();
    void set_lastname(string ln);
    string get_lastname();
};
#endif
```

```
#include "person.h"

Person::Person()
{
    firstname="unknown";
    lastname="unknown";
}

Person::Person(string fn, string ln)
{
    firstname=fn;
    lastname=ln;
}

void Person::showInfo()
{
    cout << "Name: " << firstname << " " << lastname << endl;
}

void Person::set_firstname(string fn)
{
    firstname=fn;
}

string Person::get_firstname()
{
    return firstname;
}

void Person::set_lastname(string ln)
{
    lastname=ln;
}
```

```
}  
  
string Person::get_lastname()  
{  
    return lastname;  
}
```

```
#include <iostream>  
using namespace std;  
  
#include "person.h"  
  
int main()  
{  
    Person *amy = new Person;  
    amy->set_firstname("Amy");  
    amy->set_lastname("Chang");  
  
    cout << amy->get_firstname() << " " << amy->get_lastname() << endl;  
    return 0;  
}
```

```
all: person.o  
    g++ main.cpp person.o -o main  
  
person.o: person.cpp  
    g++ -c person.cpp  
  
clean:  
    rm -f *.o main *.*~ *~
```
